

- Manufactured on state-of-the-art machines, these mattresses consistently offer the best in terms of quality.
- Each spring flexes individually in response to the body weight to ensure that only the area that bears the load is compressed while other areas remain unaffected. Each spring therefore aligns itself to the body's requirements. This mode of alignment allows the spine to remain in its natural S-shape.
- A varied spring density core allows the creation of different comfort zones on the mattress. This is necessary as our body is contoured and needs different levels of support and comfort at different points.
- Only Sleepwell® mattresses are treated with Ultra-Fresh\*. This builds in protection against harmful dust mites, bacteria and fungi. This ensures that your mattress remains fresh & clean throughout its life.
- The high quality design and materials used ensure it lasts for years.
- Inner springs are environment friendly and 100% recyclable.
- Available in custom sizes.
